DOCUMENT-IDENTIFIER: US 5707877 A

TITLE: Biodegradable gelatin-aminodextran particle coatings
of and processes
for making same

----- KWIC -----

7. For magnetic separation and sorting of cells and other biological substances, the preferred magnetic particles are "soft" magnetic particles. That is, particles which can be easily magnetized and demagnetized as opposed to hard or permanent magnetic. The particles can be ferromagnetic, ferrimagnetic or superparamagnetic. Ferromagnetic and ferrimagnetic particles are not limited in size, whereas superparamagnetic particles are limited to single domain structures of dimensions usually less than about 40 nanometers.
(C. Kittel et al., Solid State Physics 3:437-464 (1956)).
